Then, in the Service drop-down menu, we can type à € c à € œFor list all the available services for the switch. All Automactions generated by the GUI will be stored in the Automations.YAML file. My kettle is connected to a switch called switch.Chaleira, so I will enter here. CREATE an automation with a condition that we have an understanding of a basic automation, let's go À " " s Create an automation that has a condition. This automation will shoot when the room light is turned on, but only if the temperature is above 23C. Home Assistant also allows us to assign a friendly name to objects, which is more legal for people. This automation will boil the kettle at sunrise, so we will name it is properly. After having specified the name and description, we need to add a trigger. When I wake up in the morning and turn on the room light, the AC turns into and start cooling the living room if the temperature is above 23c. It is connected, we will set the type of trigger for the state. We would like our automation to be triggered only when sensor:TemperatureDownstairs is above 23. - ID: "1582583923026" Also known by: Morningac Description: Connect air conditioning at sunrise if the Temperature is above 23 degrees Trigger: - ID ENTITY: LIGHT.LOHAStWO platform: 'Disabled' for: Condition 'On': - Above: condition "23": State ID ENTITY NUMBER Rich: Sensor:TemperatureDownstairs Add to the end, we will specify the action as the switch.turn_on service. An example would be the possibility of making our lamp automatically
